home safe, compliant
and ready to sell today*

Important Legislation

Dwellings being sold or leased from 1st January 2022 will require to upgrade their smoke alarms as per new Queensland legislation.

Smoke alarms in the dwelling must:

- Be photoelectric (AS3786-2014); and
- Not also contain an ionisation sensor; and
- Be powered by 240 volt (hardwired) or non-removable 10-year battery.
- Be less than 10 years old; and
- Operate when tested; and
- Be interconnected with every other smoke alarm in the dwelling so all activate together.

Existing smoke alarms manufactured more than 10 years ago, as well as any smoke alarms that do not operate when tested, must be replaced with photoelectric smoke alarms that comply with Australian Standards 3786-2023.

Existing hardwired smoke alarms that need replacement must be replaced with a hardwired smoke alarm.

Each storey of the property must have smoke alarms installed in the following locations:

- In each bedroom; and
- In hallways which connect bedrooms and the rest of the dwelling; or
- If there is no hallway, between the bedrooms and other parts of the storey; and
- If there are no bedrooms on a storey, at least one smoke alarm must be installed in the most likely path of travel to the exit of the dwelling.

Smoke Alarms Save Lives

Did you know....

When you are asleep, your sense of smell also sleeps? The smell of smoke will not wake you up however a working smoke alarm will!

You are twice as likely to die in a house fire if you do not have working smoke alarms.

Don't wait until it is too late.

Failure to ensure the safety of those under your roof could result in the dismissal of insurance claims, damages, injury or worse death.

About our suppliers...

Brooks Australia is a family owned and operated company that for 50 years has been protecting Australian families and property. Over that time they have developed and supplied an array of high quality, reliable products based on their knowledge and experience to help safeguard you and your family.

Brooks smoke alarms have been specifically designed to withstand the tropical climate that Mackay can experience which leads to far less false activation rates.
